

# Putting the trust in Zero Trust

There are three key statements enterprises must consider in order to move forward in protecting corporate resources from leakage and attack:

- The perimeter has disappeared.
- Legacy security technologies do not apply.
- Devices cannot be trusted.

As employees continue to use a mix of managed and unmanaged devices, it sets up the need for a new security architecture: Zero Trust for mobile.

Read this whitepaper to learn how the Lookout platform gives enterprises a tangible way to bring Zero Trust security to their organization. Lookout Continuous Conditional Access protects corporate data accessed by any mobile device in the enterprise.
