# 8 Biggest Mistakes IT Makes and How to Avoid Them

Organizations across the world struggle with numerous IT monitoring challenges — hybrid environments, lack of visibility during cloud migration, multiple monitoring tools, reliance on manual processes and more. Yet, less than half of IT practitioners are confident they can ensure performance and system availability with their current toolset. So how can IT effectively manage increasingly complex, hybrid environments?

This guide outlines the 8 biggest mistakes IT practitioners make and provides solutions, key takeaways and real-world examples to help you improve IT monitoring and troubleshooting in your organization. Find out how to move from reactive to proactive IT and eventually, predictive IT.

Download your copy to learn how to:

- Achieve end-to-end-visibility throughout cloud migration
- Find trends and root cause faster with automated investigations
- Eliminate friction between IT and the business
