

The Essential Guide to Zero Trust

Now more than ever, organizations are turning to a zero trust strategy to secure their data and systems. Regardless of size or sector, zero trust is essential to any business in the wake of COVID-19. And high-profile breaches (see: [SolarWinds](#)), cloud migration and an ever-expanding attack surface mean that a shift in approach is critical.

The good news? A zero trust model can radically improve your organization's security posture by eliminating the sole reliance on perimeter-based protection.
