

A Guide to Embracing a Zero Trust Security Model in Government

Public sector agencies are undergoing a massive digital transformation, which is now imperative, thanks to the massive shift to remote work. The traditional enterprise perimeter has dissolved, exposing new vulnerabilities for cyberthreats and expanding the attack surface. In response, the Biden Administration has issued an executive order (EO) mandating improvements to government cybersecurity.

So how can federal agencies stay ahead of the latest threats and meet new mandates while reaping the rewards of digital transformation?
