

VMware Horizon: Deriving value from SaaS for virtualized desktop and app virtualization

Organizations are turning to virtualized desktops and applications as a way to ensure business continuity and employee productivity while reducing costs. VMware Horizon® provides a software-as-a-service (SaaS) desktop and application virtualization solution with a flexible infrastructure that can scale to the cloud, modernize desktop operations, and provide end-to-end security. SaaS continues to grow with the explosion of cloud services, allowing organizations to transform how they run their business, lower the financial barriers to new technology adoption, and provide a higher return on your investment. Read this brief to examine how Horizon with SaaS services can provide value to your organization, and save you money along the way.
