Gartner MQ for SIEM The Transformational CISO’s Guide to Security, Orchestration, Automation, and Response

Too many security teams are bogged down by the demands of constant alerts, which can run to thousands per day. Stuck dealing with fire drills and routine

tasks, security leaders and analysts lack the time to provide the strategic guidance their organizations need and expect.

By modernizing security with SOAR, time-draining tasks disappear from security analysts' to-do lists. Orchestration ensures that security tools are working together for better workflows and better collaboration between analysts. **The ROI of SOAR is big:**

- Without SOAR, an average 64 percent of security alerts go unaddressed
- With SOAR, the time needed to respond to an alert can drop from 30 minutes to 30 seconds
- A team of three analysts in a SOAR-equipped SOC can have the impact of a team of 10 to 15 analysts

Get the guide to learn how you can shift the balance of power and go from overwhelmed to in control.
