CIO REPORT

Observability and security convergence

Enabling faster, more secure innovation in the cloud

©2023 Dynatrace

"We asked 1,300 CIOs and senior DevOps managers about the challenges they face. Here's what they reported:

- Organizations are often sacrificing code quality, reliability, or security to meet the demand for rapid software delivery.
- Manual approaches are not scalable, and teams can no longer waste time troubleshooting or patching vulnerabilities.
- Converging observability and security — and increasing the use of AIOps — will be critical to faster and more secure innovation."
