

Mentor Medical: Scanning vital Production files assures compliance

Mentor Medical, a world leader in breast implant manufacturing, research, and testing, wanted to streamline the process of keeping and accessing vital batch records.

Facing outdated paper storage and auditing obstacles, Mentor Medical first looked to Iron Mountain to provide full-scale digitization of its records archive—an effort that resulted in more than 1.6 million PDF images!

Today, Iron Mountain collects and scans around 20 boxes of files each month and has helped Mentor Medical with access, efficiency, and a simplified compliance process.
