

The Expert Guide to Mitigating Ransomware & Extortion Attacks

The Strategies to Defend against Cyber Attacks with MITRE ATT&CK

The threat landscape is ever evolving. Modern threat actors constantly develop new tactics, techniques and procedures (TTP) so it's crucial to stay up to date with the latest strategies for protecting your organization.

Security experts from Unit 42 have unveiled the most commonly observed TTPs in ransomware and extortion by analyzing incident response case data and mapping it to the MITRE ATT&CK® framework. This guide provides actionable recommendations to help you and your team put insights into action.

Download the guide to get:

- An overview of the capabilities most commonly observed across the MITRE ATT&CK framework.
- Insights and advice to guide your strategy.
- Practitioner-focused recommendations.
