

## Want to Secure Your Hybrid Workforce with ZTNA? Look for these 10 Must-Have Capabilities

The way we work has undeniably changed. As organizations embrace hybrid work, while also considering return to office, they're moving growing numbers of mission-critical applications to the cloud so that they can take full advantage of the flexibility, scalability, and efficiencies it offers.

But this shift doesn't come without challenges. Large-scale adoption of hybrid work—along with greater use of the cloud and increased mobile access—can expand the attack surface, and legacy technology isn't helping.

Growing numbers of organizations are choosing Zero Trust Network Access (ZTNA) to strengthen their security posture for hybrid work. ZTNA provides a clear, well-defined framework to follow on the path to zero trust.
